

Hero Core 1000 Pro

SKU SH203-1000-Pro

PRICE £750 / ~~£950~~

FEATURES

- Improves 4G signal and voice calls on EE, O2, Vodafone, Three, and most UK networks
- Designed for rural, semi-rural, and low-coverage locations with limited outdoor signal
- Supports the two main UK 4G frequency bands used by all major mobile providers
- Delivers clearer calls and more stable 4G mobile data indoors

ABOUT

Reliable signal starts at the source – and Signal Hero Core 1000 is designed to bring it consistently indoors. Missed calls, dropped connections and unstable data don't have to be part of daily life in rural, semi-urban or low-coverage areas. The system is **built to cover properties up to 1000 sqm**, making it suitable for larger homes, offices and multi-room buildings.

Signal Hero Core 1000 supports all major mobile networks, **delivering stable 4G data and dependable voice calls across wide floor areas**. It captures available signal from the nearest cell tower using a dedicated outdoor antenna, transfers it through professional-grade cabling to the booster unit, and redistributes the strengthened signal indoors via a panel antenna. This setup is ideal where outdoor signal exists but struggles to reach inside larger properties.

It works effectively for everyday mobile use and 4G SIM routers, helping stabilise both calls and mobile data throughout the building.

Installation follows a proven layout used in residential and rural environments.

There are no subscriptions or ongoing fees. Signal Hero Core 1000 **includes a 60-day money-back guarantee and a 3-year warranty** for added peace of mind.

 INSTANT SIGNAL BOOST

 UP TO +80db GAIN

 SUPPORTS UP TO 50 USERS CONNECTIONS

 FAST NETWORK & DATA SPEED

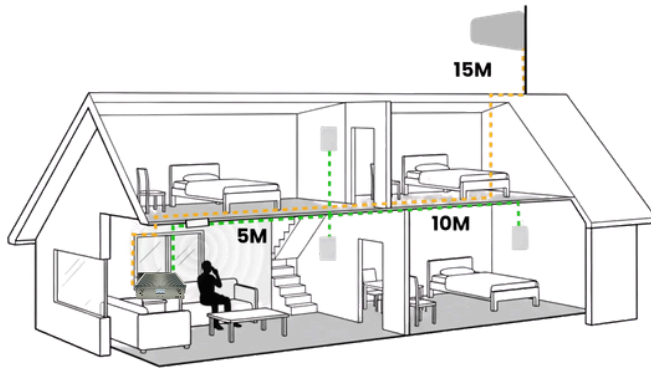

KIT INCLUDES

SPECIFICATIONS

MODEL NUMBER	SH203-1000-Pro
FREQUENCIES	BAND 20 AND 3 800 MHz / 1800 MHz
MAX GAIN	80 dB \pm 2
IMPEDANCE	50 Ohm
POWER SUPPLY	AC 100-240V
CONNECTORS	N-FEMALE
WORKING TEMPERATURE	-25°C ~+55°C
BOOSTER DIMENSIONS	26 x 25 x 7.6 cm
BOOSTER WEIGHT	<4Kkg

INSTALLATION

1

The signal is received from the outdoor cell towers and transmitted through the cable to the booster box.

2

The booster box receives the signal from the outdoor aerial and retransmits it to the indoor antenna via a cable.

3

The panel antenna mounted on the wall receives the signal and retransmits a clean, high-quality phone signal throughout the property.
