

Hero Core 300 Pro

SKU SH203-300-Pro

PRICE £295 / £375

FEATURES

- Improves 4G signal and voice calls on EE, O2, Vodafone, Three, and most UK networks
- Designed for rural, semi-rural, and low-coverage locations with limited outdoor signal
- Supports the two main UK 4G frequency bands used by all major mobile providers
- Delivers clearer calls and more stable 4G mobile data indoors

ABOUT

Reliable signal starts outside – and Signal Hero Core is designed to bring it properly indoors. Missed calls, dropped connections and unstable data don't have to be part of daily life in rural, semi-urban or generally weak-coverage areas, **even where outdoor signal is limited to just 1-2 bars.**

Built as a universal solution, Signal Hero Core supports all major mobile networks, providing stable 4G data and dependable voice calls. It captures available signal from the nearest cell tower using a dedicated outdoor antenna, transfers it via professional-grade cabling to the booster unit, and redistributes the strengthened signal indoors through a panel antenna. This makes it suitable for a wide range of property types and coverage situations.

Signal Hero Core works effectively for everyday mobile use as well as 4G SIM routers, helping stabilise calls and mobile data where indoor reception is weak despite usable outdoor signal.

Installation follows a straightforward, proven layout used across residential and rural environments. Our UK-based support team is available before and after purchase.

There are no subscriptions or ongoing fees. Every unit includes a **60-day money-back guarantee and a 3-year warranty** for added peace of mind.

INSTANT SIGNAL BOOST

UP TO +72db GAIN

SUPPORTS UP TO 30 USERS CONNECTIONS

FAST NETWORK & DATA SPEED

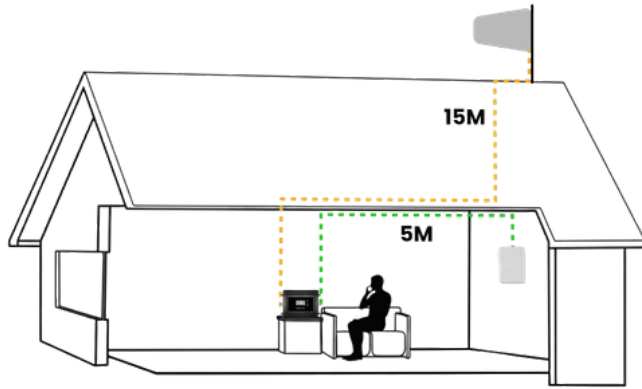

KIT INCLUDES

SPECIFICATIONS

MODEL NUMBER	SH203-300-Pro
FREQUENCIES	BAND 20 AND 3 800 MHz / 1800 MHz
MAX GAIN	72 dB ±2
IMPEDANCE	50 Ohm
POWER SUPPLY	AC 100-240V
CONNECTORS	N-FEMALE
BOOSTER DIMENSIONS	20.5 x 12.5 x 4.8 cm
BOOSTER WEIGHT	<0.6Kkg

INSTALLATION

The signal is received from the outdoor cell towers and transmitted through the cable to the booster box.

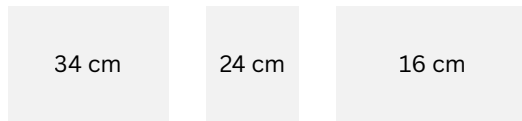

The booster box receives the signal from the outdoor aerial and retransmits it to the indoor antenna via a cable.

The panel antenna mounted on the wall receives the signal and retransmits a clean, high-quality phone signal throughout the property.
