

Hero Core 300

SKU SH203-300

PRICE £275 / £335

FEATURES

- Improves 4G signal and voice calls on EE, O2, Vodafone, Three, and most UK networks
- Designed for rural, semi-rural, and low-coverage locations
- Supports the two main UK 4G frequency bands used by all major mobile providers
- Delivers clearer calls and more stable 4G mobile data indoors

ABOUT

Reliable signal begins outside – and Signal Hero Core is engineered to bring it consistently indoors. Missed calls, dropped connections and unstable data don't have to be normal in rural, semi-urban or generally weak-coverage areas.

Designed as a universal solution, Signal Hero Core supports all major mobile networks, delivering stable 4G data and dependable voice calls. It collects available signal from the nearest cell tower using a dedicated outdoor antenna, transfers it through professional-grade cabling to the booster unit, and redistributes the strengthened signal indoors via a panel antenna. This configuration makes it suitable for a wide range of property types and coverage situations.

Signal Hero Core works well for everyday mobile use as well as 4G SIM routers, helping stabilise calls and mobile data where outdoor signal is usable but indoor reception drops significantly.

Installation follows a straightforward, proven layout used across residential, rural and semi-urban environments. Our UK-based support team is available both before and after purchase.

There are no subscriptions or ongoing costs. Every unit includes a **60-day money-back guarantee and a 3-year warranty**, allowing you to improve your signal with confidence.

 INSTANT SIGNAL BOOST

 UP TO +70db GAIN

 SUPPORTS UP TO 25 USERS CONNECTIONS

 FAST NETWORK & DATA SPEED

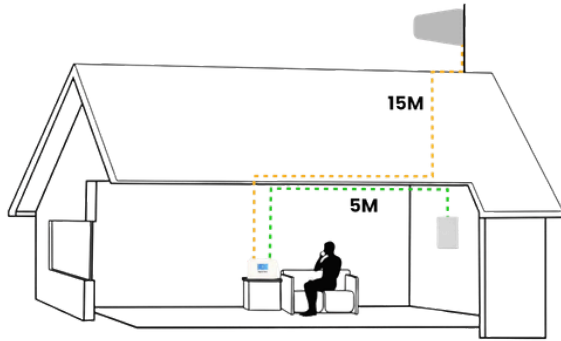

KIT INCLUDES

SPECIFICATIONS

MODEL NUMBER	SH203-300
FREQUENCIES	BAND 20 AND 3 800 MHz / 1800 MHz
MAX GAIN	70 dB ±2
IMPEDANCE	50 Ohm
POWER SUPPLY	AC 100-240V
CONNECTORS	SMA-FEMALE
BOOSTER DIMENSIONS	21 x 15 x 2.8 cm
BOOSTER WEIGHT	<1Kkg

INSTALLATION

The signal is received from the outdoor cell towers and transmitted through the cable to the booster box.

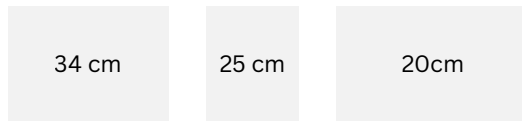

The booster box receives the signal from the outdoor aerial and retransmits it to the indoor antenna via a cable.

The panel antenna mounted on the wall receives the signal and retransmits a clean, high-quality phone signal throughout the property.
